UNIVASA FINTECH API SOLUTION

Univasa Nigeria Limited is a dynamic and forward-thinking Information Technology company, positioning itself as a cutting-edge Tech-Com provider by offering innovative solutions across diverse sectors such as telecoms, financial services, and IoT among others.

With a relentless commitment to innovation, the company aims to redefine the industry by offering a diverse range of technology-based solutions and services. Driven by a vision to achieve both profitability and scalability, Univasa leverages its expertise in telecommunications and cutting-edge technologies to create tailored solutions for businesses and consumers alike.

Univasa FinTech API Solution is a backend application designed to facilitate easy and fast deployment of financial solutions for small and medium financial institutions. Our API directory contains everything you require to build a functional and robust system and manage, monitor, and scale your operations.

Univasa FinTech API Solution provides user-friendly APIs for quick and easy integration to whichever platform and application including Mobile Applications, POS, and Web Applications fits your business needs. Established connections with partners such as CGate VAS payments, Bank transfer, Squad, VPay, Virtual Payment Collection, Nuban Account Creation, and Webhooks notifications.

These APIs can be accessed through different transactional channels such as ATM Cards, POS, WhatsApp Banking, and Shared or Dedicated USSD Code Integration upon request.

Features

Single Funds Transfer: Extremely simple and intuitive design API engine that allows you to seamlessly transfer money to any fintech organization.

Bulk Funds Transfer: Also have an API option to make bulk transfer, especially for staff salary payment, workers' wages e.t.c.

Airtime Payment: Refined API interface also allows for Airtime Recharge for multiple telecommunications networks.

Features

Data Purchase: You have the freedom to use a single API interface in data top(s) situation(s), ranging from daily to yearly, for any telecoms network.

Paid TV Bill Payment: Easily integrate for paid TV bill payment such; DStv, GOtv, e.t.c.

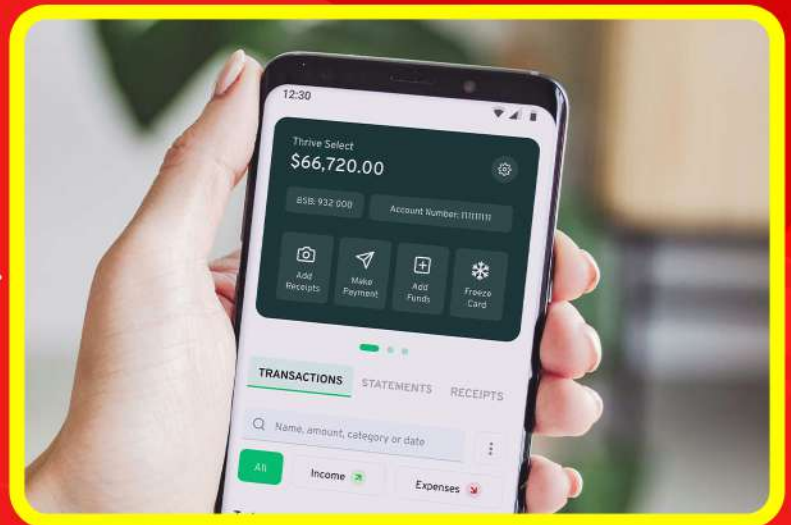

Electricity Bill Payment: Quickly implement an API interface for settlement of Electricity Bills.

Features

Account Creation: Easily implement an API interface to create custom account number for your customers and receive payments.

Wallet Management: Keep track of users transactions, buy using the API interface to check and monitor a users wallet.

Transaction Query: Keep a pulse on all of your in-app transactions, from funds transfer to VAS purchases and payment. Availability of transaction query makes the task of bookkeeping a breeze.
